## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the focusing bar claimed in claim 18 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

Art Unit: 3747

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9, 12, 14, and 15 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ettehadieh (5,063,368).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10, 11, 13, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ettehadieh (5,063,368). Ettehadieh shows everything except providing a second magnet assembly including a second metal plate identical to the magnet assembly shown and locating the north pole of the magnet adjacent to the fuel line.

According to MPEP 2144.04 VI (B), it has been held that mere duplication of parts has no patentable significance unless a new and unexpected result is produced. It would have been obvious to one of ordinary skill at the time the invention was made to provide a second magnet assembly, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Art Unit: 3747

With respect to claim 17, it would have been prima facie obvious to substitute the north pole for the south pole as the pole adjacent the fuel line, since they are art recognized alternatives known for the same purpose, as evidenced by numerous claims in the instant application citing the use of the south pole located adjacent the fuel line.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ettehadieh (5,063,368) in view of Melendrez (5,271,369). Ettehadieh shows everything except employing a focusing bar. Melendrez teaches that it is old in the art to employ a focusing bar 150 (see Figure 7). It would have been obvious to one of ordinary skill in the art to modify Ettehadieh by employing a focusing bar, in order to concentrate the magnetic flux into the fuel line.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the alternating magnetic pole orientations of Akyildiz (6,041,763), the focusing bar of Cronk (5,816,227), and the metal plates of Jeong (5,329,911).
